ICO Success Prediction

Jaewon Lee | jaewon.lee@columbia.edu

PROBLEM

There has been an enormous craze over Initial Coin Offerings (ICO)

It is often regarded as a get-rich-quick scheme;

Scams and ponzi-schemes are prevalent

Investors are blinded by greed and false hope, and fail to see the true value

Legitimate projects do not get the healthy support

Many projects have failed, lost value, or even ceased to exist

SOLUTION

Prediction model available to public that predicts project success based on data

Key Elements in ICO/Project Success

Soft/Hard Cap

Total Amount of Money to be Raised, Set by Team

Token Distribution Percentage

How tokens are distributed among participants

Team Composition

Development team, advisory board, etc

Length of Project

How long the project has been in development

Whitepaper Quality

Development Activity

Amount of work actually done on code repository

Origin of Project

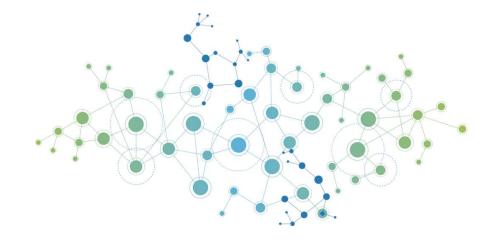

Where

Project Type

Finance/Entertainment/Digital Assets/Legal/etc

Payment Form Received

Common payments include BTC/ETH/NEO/USD

How to Define "SUCCESS"

Although it is not the sole indicator that represents "success", the current market capitalization and Return of Investment of cryptocurrencies will be used to define the success of a project

DATA

Data will be collected from various sources that contain historical ICO data on projects

https://icostats.com/

https://www.coindesk.com/ico-tracker/

https://tokentops.com/ico/past/

https://www.ico-list.com/

https://icorating.com/

https://icotimeline.com/

https://www.trackico.io/ico/

Example of Data

NEO – Formerly Known as Antshares

Token: ANS

Token ICO Price: 0.03 USD

Total Raised: 28,056,944 USD / 6,119.53 BTC

Token for Sale: 20,000,000 ANS

Payment Form Accepted: BTC

Available Supply: 10.0 million ANS

Total Supply: 16.4 million ANS

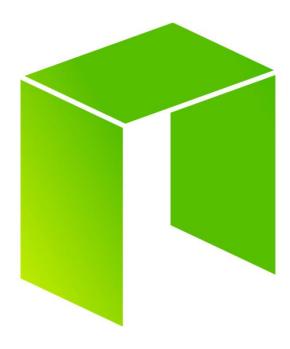

Current Price: 68.627460 USD

Country of Origin: China

ROI (in USD): 228,758.2%

ICO Date: July 9th 2016 To July 9th 2016

Original# Team Members: 4

APPROACH

- 1. Quantify qualitative data
 - Sentiment Analysis applied on project reviews and comments; "convert" text into negative/neutral/positive
 - Frequency of key words such as "scam", "ponzi"
- 2. Qualitative features used to build a regression model
- 3. Predict [Y = Return of Investment As of Today] from [X = features]
- 4. Use 80% of data as training set; 20% as test set
- 5. Extensive data available to validate the model

Sentiment Analysis

```
VADER is smart, handsome, and funny.
compound: 0.8316, neg: 0.0, neu: 0.254, pos: 0.746,
VADER is smart, handsome, and funny!
compound: 0.8439, neg: 0.0, neu: 0.248, pos: 0.752,
VADER is very smart, handsome, and funny.
compound: 0.8545, neg: 0.0, neu: 0.299, pos: 0.701,
VADER is VERY SMART, handsome, and FUNNY.
compound: 0.9227, neg: 0.0, neu: 0.246, pos: 0.754,
VADER is VERY SMART, handsome, and FUNNY!!!
compound: 0.9342, neg: 0.0, neu: 0.233, pos: 0.767,
VADER is VERY SMART, really handsome, and INCREDIBLY FUNNY!!!
compound: 0.9469, neg: 0.0, neu: 0.294, pos: 0.706,
The book was good.
compound: 0.4404, neg: 0.0, neu: 0.508, pos: 0.492,
The book was kind of good.
compound: 0.3832, neg: 0.0, neu: 0.657, pos: 0.343,
The plot was good, but the characters are uncompelling and the dialog is not great.
compound: -0.7042, neg: 0.327, neu: 0.579, pos: 0.094,
A really bad, horrible book.
compound: -0.8211, neg: 0.791, neu: 0.209, pos: 0.0,
At least it isn't a horrible book.
compound: 0.431, neg: 0.0, neu: 0.637, pos: 0.363,
:) and :D
compound: 0.7925, neg: 0.0, neu: 0.124, pos: 0.876,
```

Natural Language Toolkit will be used to perform Sentiment Analysis

Taken from http://www.nltk.org/howto/sentiment.html

Posts and reviews on projects are good indicators of investor sentiment – this example shows the frequency of the word "Scam"

Potential Difficulties

Data collection is done semi-manually; time/effort will be put but it may not be enough

There are a lot of other factors that may cause inconsistencies (i.e. general market sentiment, politics, international regulations)
